our story

InGlobal Learning Design is a Michigan-based nonprofit organization focusing on instructional design, project management, development of learning technologies, and professional development for professionals of all types. Through the use of a six phase human centered design process, cultivation of a design mindset, and playful learning, InGlobal develops capacity for innovation, collaboration, civic engagement, social entrepreneurship, and creativity. It is closely affiliated with the Interactive Communications & Simulations Group (ICS) at the University of Michigan.

InGlobal Learning Design collaborates with nonprofit, education, and private sector leaders to develop solutions to educational, social, and organizational challenges.

We support practitioners, creative professionals, and organizations with innovative solutions based on insights into human needs, rapid prototyping, user-testing, and interdisciplinary team work.

our services

InGlobal Learning Design draws on an extensive network of partners, collaborators, and fellow travelers to provide consulting services including:

- Instructional design
- Professional development
- Cultivation of a design mindset
- Learning technologies development
- Online course design
- Curriculum design
- Global/remote project management
- Organizational change
- Web and mobile app development
- Event planning and management

Our services are available to individuals, schools, districts, government organizations, non-profit and the private sector.

our process

A six part human-centered design process provides a common framework across our work. This process includes:

Discover: Learn about the situation and the people involved.

Frame: Define the problem.

Imagine: Invent potential solutions, processes, or approaches.

Prototype: Create a mockup.

Engage: Test the prototype and receive feedback.

Reflect: Analyze feedback and iterate the design.
